

## HOW TO CONTACT COMPGENE

CompGene is open Monday through Friday from 7:00AM to 6:00PM. Outside of regular office hours our laboratory technology staff and professional staff can always be reached 24 hours a day 7 days a week to receive a sample or for consultation regarding a patient or sample.

If there is a patient sample for a STAT cytogenetic or molecular analysis (such as a bone marrow from a new leukemic or a blood from a newborn with multiple congenital anomalies) or if you have a question regarding one, please call CompGene at 414-393-1000. After hours our answering service will contact us. We will promptly return your call and make arrangements for the sample to be delivered to CompGene.

**Some hospital send out departments have CompGene's inside telephone numbers. Please do not use the inside numbers after hours because we do not have someone in the laboratory at all times.** Please use the numbers outlined above and listed again below for quick reference.

CompGene – 414-393-1000
